- SANITARY SEWER
- STORM SEWER
- COMBINED SEWER

ISSUES

Existing chilled water capacity will not support future building projects in the South West Quadrant.

Future building projects in the South West Quadrant will require an increase of capacity to the West Sub Station and an additional primary feed from the East Sub Station.

Aging and obsolete IT infrastructure requires incremental replacement.

Potential Edgewood Avenue stormwater management project.

Continued campus stormwater management improvement projects.

An accurate GIS survey of all underground utilities is vital for future planning and as projects are undertaken.
